**Import and Export of new and  
used Electric Vehicles**

We are engaged in import & export of vehicles where we guarantee our customers the best prices through a strategic export and import policy and cross-market procurements.

# 7 BENEFITS OF PAINT PROTECTION FILM FOR YOUR VEHICLE

PROTECTS AGAINST FADING

MAINTAINS YOUR CAR RESALE VALUE

PROVIDES INVISIBLE PROTECTION

SELF-HEALING PROPERTIES

PREVENTS CHEMICAL REACTIONS

REDUCES THE NEED FOR WASHING

The film is typically applied to the surfaces of vehicles to protect the paint from debris. The bottom layer has an acrylic adhesive designed for flexibility. It makes it easier for the film to wrap and stretch around irregular shapes or on different contours of vehicles. Though the film primarily protects you from scratches due to versatility, it also shields the car from parking incidents and road salt to make the vehicle pristine for longer. Below are the benefits of paint protection films for vehicles.

## EV PROTEC

Give your vehicle the protection it requires to be roadworthy.

### PPF Wrapping

Paint Protection Film is a transparent polyurethane film with a high impact resistance. PPF protects and reduces damage to vehicle paint caused by stone chips, heavy traffic areas in everyday use, and small accidents.

Areas might change depending on the needs of the consumer. Common applications and locales included are the rear boot ledge, door cups, door edges, side rearview mirror caps, bonnet, front bumpers, and rear quarter door panels.

Nizine offers a series of films for PPF and the applicable warranty is 3 years.

## Ceramic Coating Diamond Package

Nano Ceramic coatings are thicker, so they better protect against micro-marring and etching. Their water repellency exceeds poly sealants exponentially, literally sheeting water off. They also block oxidation and inhibit UV rays in ways poly sealants just can't. And the gloss they produce is in a category of its own.

One other benefit is how amazing they make your car look brand new. Many of these coatings require an authorized detailer to apply them for you. That means that they have experience in preparing the paint for application.

It is a highly durable protective coating that protects your paintwork from damaging contaminants. Nano Ceramic can be applied in multiple layers which means the thickness of the coating can be increased with additional layers allowing a thicker/harder coating with improved scratch resistance.

## Window Tinting

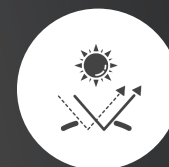

Improve your privacy and UV protection in your vehicle. Window films provide several advantages and complement existing automobile glazing. From heat rejection to elegant tinting, from glass shatter retention to robbery prevention, EV PROTEC window films provide optimal comfort, aesthetics, and safety for your vehicle.
