EV Wall Charger GB/T 7KW 32A

EV WALL CHARGER

MODEL: WCHRG-7KWGB-2460

APPLICATION DOMESTIC|COMMERCIAL

PRODUCT INFORMATION

The EV Protec 7kW 32A GB/T Wall Charger is an electric vehicle (EV) charging station designed to be used with electric vehicles that are compatible with the GB/T standard, which is the official Chinese standard for EV charging.

1. Charging Power:

7 kW (kilowatts): This refers to the maximum power output of the charger, indicating how quickly it can charge your vehicle. A 7 kW charger is considered a Level 2 charger, which is suitable for home and public charging stations. It typically provides around 30-40 miles of range per hour of charging, depending on the vehicle.

2. Current Rating:

32A (Amps): The charger can supply a maximum current of 32 amperes. This is common for home chargers in many regions and indicates that the charger is powerful enough to provide a relatively fast charge (though the actual charging speed also depends on the vehicle's onboard charger).

3. GB/T Standard:

This is a Chinese charging standard that is primarily used in China. The GB/T standard is different from the Type 1 (used in North America) and Type 2 (used in Europe) charging connectors. The charger would be equipped with a GB/T connector, and it's suitable for EVs that use this standard (like many Chinese-made electric vehicles).

Summary:

- **Power:** 7 kW
- **Current:** 32A
- **Connector:** GB/T (China's EV charging standard)
- **Usage:** Wall-mounted, typically for home charging

SPECIFICATION TABLE

DESCRIPTION	VALUE
Output Power	7kW
Input Voltage	200 - 220v
Application	AC Home Charging
Rated Current	16A / 32A
Cable length	5 Meters
Rated Output Power	3.5KW - 7KW
Charging Gun	GB/T
Protection	IP65
Transport Package	Standard Export Carton Box
Startup mode	Plug and charge, Smart card to start
Warranty	01 Year
Brand	EV PROTEC UK
